Chapter 6

Steps involved in construction

- Site clearance
- Marking
- Excavation
- Foundation
- Concreting
- Wall construction
- Beam and column
- Finishing

6.1. Site clearance

A number of conditions determines the kind of building that may be erected on a plot of ground. These conditions determine where on the plot it may be located. There are also covenants that are legally binding regulations. These may be setting height of building, prohibit utility of buildings or ban rooftop network towers etc. Zoning laws regulate the setback and other factors that play into equation of house location a lot. Septic tanks also require special considerations and a certificate of occupancy is also required for some loaning and legal processes.

6.2. Marking: Layout of a building or a structure shows the plan of its foundation on the ground surface according to its drawings, so that excavation can be carried out exactly where required and position and orientation of the building is exactly specified.

Dimensions of one side of the footing are restricted to some lower value.

Fig. 10 Ecentric footing

Fig 11. pad footing

6.5. Concreting

After shuttering and scaffolding concreting should be done.
