## ABSTRACT

Mushrooms are classified as vegetables in the food world. They are not vegetables, they are Fungi. Mushrooms provide several important nutrients and also used for production of medicines. This project mainly focuses of the monitoring of the mushroom farms. Environmental condition is a significant factor. Mushrooms are unable to grow if the temperature is higher than 33°C or lower than 25°C. This Project focuses on automatic environmental control system to provide optimum condition to mushroom. By implementing (IOT) monitoring & Environment control we can reduce labor cost & increase the productivity. Here light Intensity sensor, Temperature & humidity sensor & CO<sub>2</sub> sensor are connected to Ethernet module to become IOT. sensor that sends data to below IOT sensor that send data to the internet for monitoring & assessment.
