GOOGLE CLASSROOM/ONLINE PLATFORM

Google Classroom is a free web-based learning platform that permits communication, presentations, videos and engagement among participants. Considered one of the best platforms in the world, this educational tool enhances the workflow of teachers while providing powerful features for students . This platform may also be used similarly to a learning management system. The purpose of Google Classroom is to assist teachers with managing, creating and collecting paperless content and assignments.

Google Classroom is compatible with a variety of devices such as mobile devices and desktop browsers, making it easier for students and teachers to access. Classes can be organized with coloured banners to help students and teachers differentiate between multiple courses and add personalization, making it customizable. On the streaming page, announcements and discussion posts appear where Youtube videos, links and other documents can be attached and embedded. The Class work page shows assignments and houses other media materials such as links, videos and other documents that are relevant to the course. Teachers can create, organize and sort assignments based on their preferences. If the teacher has not created a document beforehand, students are able to create one if it has been linked to a particular assignment. This is especially useful for teachers who are giving assignment instructions in different formats such as a video. Once this task has been completed, the student can mark it as done. Additionally, there are a number of class work activities available such as open-ended assignments, quizzes, materials and more.
