Description

Our institution strives to cater to the overall developmental needs of the students and thus organizes various co-curricular activities every year. One such important event held in the institution was Shri Anveshana 2022. On 25th Nov 2022, a science talent hunt program was conducted in a large scale in the institution's campus. Students of different PU Colleges in and around Tumkur and across the state of Karnataka were invited to take active participation in the event. Three different interesting contests were held as part of the event, aiming to gather bright students from different institutes and provide them a platform where they can showcase their talent and win attractive prizes. Firstly there was a story narration completion wherein the students could narrate a story by choosing a theme of their interest. The themes were allowed from the students' own life experiences, from the lives of great people or great scientists, or from any readings - fictional, factual or creative ones. The contest aimed at giving wings to the imagination of the young students and to give them an opportunity to show their oratory or presentation skills. The students were instructed to participate in teams of two to encourage team working.

The second contest was science quiz competition wherein the students were required to answer science questions in CET – PCM pattern. The first round was written and the second round was oral. Teams of two students took part in the event and performed enthusiastically.

The third contest was poster or model presentation on science themes. Example themes were given, but the students were given the liberty to choose any other themes if required. The students prepared the posters or models in advance and presented them in our campus. The students also actively interacted with the visitors, explained the concept behind their posters or models and answered the questions posed.

One faculty representative from every Institute was requested to co-ordinate the entire registration process and to accompany your students to the event. A detailed set of instructions – rules and regulations were given to the participants well in advance. Their performances in the

contests were evaluated by expert panels of judges. Prizes were given to the winners and participation certificates were given to all the students.

The event got an overwhelming response from various institutions within and outside the city. Around 400 students in total participated in the event.

Along with the contests, a project exhibition was arranged wherein some innovative projects done by the students of our Institutions were exhibited to the PU students coming from other colleges. This facilitated interaction between our engineering students and the science enthusiast students of various PU colleges. This boosted the confidence of our students while presenting and explaining their projects and provided a good exposure to the students of PU Colleges, thus enabling mutual benefit and exchanges. This was a classic example of institution-institution interaction.

In the inaugural function of the program that was held in the auditorium, one of the popular educationalist Mr. Pradeep was felicitated. Mr. Pradeep shared his valuable knowledge and experience with the students and provided valuable inputs. The students were inspired by Mr. Pradeep's talk and got motivation to excel in their studies. In the valedictory function, two more luminaries in the field of education – Mr. Ananthnarayan and Mr. Vasudev were felicitated. Both of them shared valuable insights with the students and motivated them. The winners were distributed prizes by the dignitaries.

Student representatives from different departments of our institution volunteered in the event. Those students got an excellent opportunity to learn planning, coordination, event management, stage management, and other management skills.

Various faculty committees were formed and various responsibilities were delegated to them. All those committees under the supervision and guidance of our beloved Principal worked in tandem with each other to make the event a grand success.

About the Course

The methods used by an attacker depend on the social media platform targeted. Facebook allows users to keep their images and comments private, so an attacker will often friend a targeted user's friends or directly send a friend request to a targeted user to access their posts. If an attacker can connect to several of the targeted user's friends, then it's more likely that the targeted user will accept the friend request based on the number of connected friends.

LinkedIn is another common social media target. LinkedIn is known for business networking, and users' networks are typically filled with colleagues and other employees within the same organization. If an attacker targets a business, LinkedIn is an excellent social media site to collect business emails for a phishing attack. A large enterprise could have several networked employees who list their employer and their titles. An attacker can use this public information to find several employees who have access to financial information, private customer data or high-privilege network access. Collecting information to steal data isn't the only reason to use social media for reconnaissance. The information posted on social media could be used to obtain passwords or impersonate business users. Many online accounts allow users to reset passwords if they enter a security question. With enough information from social media posts, an attacker could guess the answer to these security questions based on the private information posted by a targeted user. Brand impersonation is another social media threat. With enough gathered information, an attacker can impersonate a business brand to trick users into sending money, divulging private information or provide an attacker with account credentials. Attackers also use this threat to perform cross-site scripting (XSS) or cross-site request forgery (CSRF) attacks. These attacks can lead to more massive data breaches and business infrastructure compromise.

Workshop Objectives

To disseminate the knowledge of social media attacks and its security issues among students

Outcome

This course is designed to prepare students to the federal job market for postings require knowledge of social media attacks and its security issues/cyber security/ At the conclusion of this course, the audience, students and the future developers who are involved in technological transformation will be able to:

1. Apply how to secure use of social media.
2. Identify the vulnerabilities and perform simple penetration testing.
3. Disseminate social media attacks and its security issues among Netzens.

About the Workshop

Blockchain Technology is an emerging technology suitable for decentralised and transactional sharing of data across a large network of untrusted participants. It is an innovative distributed ledger technology where verification data for the transactional records is cryptographically secured against tampering and stored in blocks. Each block contains details of transactions, hash of the previous block, timestamp etc. Blocks are linked with each other, leading to a Block Chain and this is stored at every node in the network. This enables transparency and gives a unique solution to the problem of trust in the digital world, leading towards decentralised trust. It has good potential to transform the logging and management of transactions in different application areas. This technology is successfully used in Bitcoin virtual currency, and it also has good potential in non-financial sectors such as Governance, healthcare, cyber security, automobiles, media, travel, hospitality, energy, smart cities, time stamping, logging of important events in a system, recording transactions, etc.

Modern information and system require high security protection on electronic data over insecure communication (Internet). Cyber security or Information Technology Security (ITC) is a field involving the protection of computer systems and the prevention of unauthorized access too. The primary objective of this course is to deliver on modern cryptographic techniques as well as hardware security concept with cybercrime issues to understand how to design secure systems for computer network model. This course moreover focuses on current emerging technology on blockchain along with future research direction in the domain of network security.

Workshop Objectives

To disseminate the knowledge of cyber security and blockchain technology among students

About the Course

Data structure and algorithms are two of the most important aspects of computer science. Data structures allow us to organize and store data, while algorithms allow us to process that data in a meaningful way. Learning data structure and algorithms will help you become a better programmer. You will be able to write code that is more efficient and more reliable. You will also be able to solve problems more quickly and more effectively. As applications are becoming more complex and the amount of data is increasing day by day, which may cause problems with processing speed, searching data, handling multiple requests etc. Data structure provides a way of organizing, managing, and storing data efficiently. With the help of data structure, the data items can be traversed easily. Data structure provides efficiency, reusability, and abstraction. It plays an important role in enhancing the performance of a program because the main function of the program is to store and retrieve the user's data as fast as possible.

Workshop Objectives

To disseminate the knowledge of data structure and its future directions among students

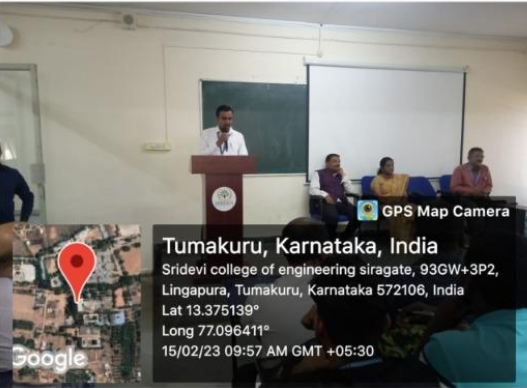

Outcome

This course is designed to prepare students to the federal job market for postings require knowledge of Data structure in future direction. At the conclusion of this course, the audience, students and the future developers who are involved in technological transformation will be able to:

1. Explain the importance of data structure.
2. Apply the Usage for its future applications.
